

# ANIMAL SCIENCE

Do all of your friends have four legs? The relationship between people and animals has been a major part of our society, economy, and culture. Animals provide us with food, clothing, recreation and companionship. Our Animal Science pathway focuses on modern, efficient and humane ways to care for and make the best use of animals who share our lives! As an Animal Science student, you will work with animals regularly to prepare for becoming a Certified Veterinary Assistant, or other Animal Science related pursuits.

If you have any questions, or would like additional information, please refer to the MFISD CTE Homepage for Animal Science contact information.
