

CONSTRUCTION TRADES

Do you enjoy working with your hands and doing home improvements projects with your family? Does a career in the construction trades industry interest you? Then we have the program with the means for you to reach your dreams and goals. We offer a comprehensive program that provides OSHA safety certification, basic and advanced construction skills, and fun shop projects. Once you master the basics, you will have the opportunity to build a Tiny House as a final project. During the Tiny House construction, you will learn how to frame, insulate, wire, plumb, roof, heat and cool, and finish a complete home. In addition to the construction process, you will learn how to market and sell your product! Please visit our website or come by the construction area at the high school and see for yourself.

If you have any questions, or would like additional information, please refer to the MFISD CTE Homepage for the Construction Teacher contact information.
